

Hypothesis Validation Summary

Pruning preserves fingerprint

E correlation stays high even at 70% sparsity

✓ **CONFIRMED**

Quantization preserves fingerprint

E correlation stays >0.95 down to INT4

✓ **CONFIRMED**

Distillation erases fingerprint

Distilled model has near-zero E correlation

✓ **CONFIRMED**

Independent training has different E

Same architecture, different training = different E

✓ **CONFIRMED**

ALL HYPOTHESES CONFIRMED
